

## Data Flow Diagram

|                      |                                                |
|----------------------|------------------------------------------------|
| <b>Date</b>          | 25 March 2026                                  |
| <b>Team ID</b>       | xxxxxx                                         |
| <b>Project Name</b>  | Smart Lender – Loan Approval Prediction System |
| <b>Maximum Marks</b> | 2 Marks                                        |

### Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

### DFD Symbol Legend

| Symbol                                   | Name                   | Description                                                                                                                   |
|------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>Oval / Rounded shape</b>              | <b>External Entity</b> | A person or system outside the project that sends or receives data (e.g., Customer, Admin).                                   |
| <b>Rectangle with numbered header</b>    | <b>Process</b>         | An activity that transforms incoming data into outgoing data (e.g., Loan Prediction Processing, Machine Learning Prediction). |
| <b>Rectangle (solid fill, no number)</b> | <b>Data Store</b>      | A place where data is stored for later use (e.g., Loan Prediction Dataset, Trained Model).                                    |
| <b>Labeled arrow</b>                     | <b>Data Flow</b>       | The movement of data between external entities, processes, and data stores, labeled with the information being passed.        |

### Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
